

Discovery Threading™ by PGI Solutions™ Makes You the Master of Your IT Network

PGI Solutions™ provides the most powerful real-time security and regulatory monitoring service to enable in-depth understanding and management of significant events across your computer network. Through patent-pending technology including **Discovery Threading™**, PGI collects, correlates and centrally manages network information so that you effectively identify, document and control data theft, insider threats and regulatory compliance. PGI services include **IT security, compliance, forensics, network performance management** and **investigative services**.

1. **IT Security** – Network forensics and unprecedented real-time information collection, correlation, analysis and reporting from PGI is the next generation of IT security monitoring.
2. **Regulatory Compliance** – Our powerful engine rapidly sorts and correlates information to discover new relationships and paths for effective monitoring of regulatory compliance including GLBA, PCI, Sarbanes-Oxley and HIPAA.
3. **Integrated Forensics** – Our processes operate in forensics mode, securely storing duplicate logs for use in litigation and prosecutions. Discovered and correlated data from a network can be viewed as a precise topology/network map in a court of law.
4. **Performance Management** – Monitoring provides comprehensive, accurate views of your network.
5. **Investigative Services** – Post-incident information is stored and used by investigators at PGI to understand precisely what occurred.

**Discovery Threading™
by PGI Solutions™ Delivers
Active Network Intelligence™.
NOW You'll Always Be on Top of
Security and Regulatory Issues
in Your Network**

New security breach schemes are being developed daily, and global businesses and organizations are being attacked every hour. **Active Network Intelligence™** featuring **Discovery Threading™** from PGI is emerging as the most valuable engine for companies, government agencies, institutions and investigators to deal with these cybercrimes. Our customizable service provides real-time visibility into an organization's networks, allowing you to identify, analyze and act upon security threats. We also document if and how regulatory compliance requirements are being met and store information for potential forensic investigations. PGI helps:

- Stop data theft and data leakage
- Identify insider and outsider threats
- Correct IT asset misuse
- Confirm compliance
- Understand and address critical network events
